VENUE SPECS

STAGE

Main Stage – 64'w X 56'd X 5'h

SL wing – 17'w X 40'd X 5'h

SR wing – 17'w X 40'd X 5'h

98'w X 17'd X 5'h behind upstage blackout

All the above are connected, flat, level, solid concrete.

Stage elevated 5'h from floor.

STAGE POWER- All 3 phase w/Cam-Lok

SL: (1) 400 amp + (1) 200 amp + (1) 100 amp

SR: (2) 400 amp + (1) 200 amp

MIX POSITION

Centered 116' from DSE (27' wide X 18' deep)

CABLING

18" PVC runs from DSL and DSR are 175' to FOH mix.

CAT6, SDI, and fiber ties are available at:

SL, SR, USC DOCK, FOH, and SPOT BOOTH

FIBER

Single mode 6 strand fiber in several positions for Video Broadcast with LC connectors.

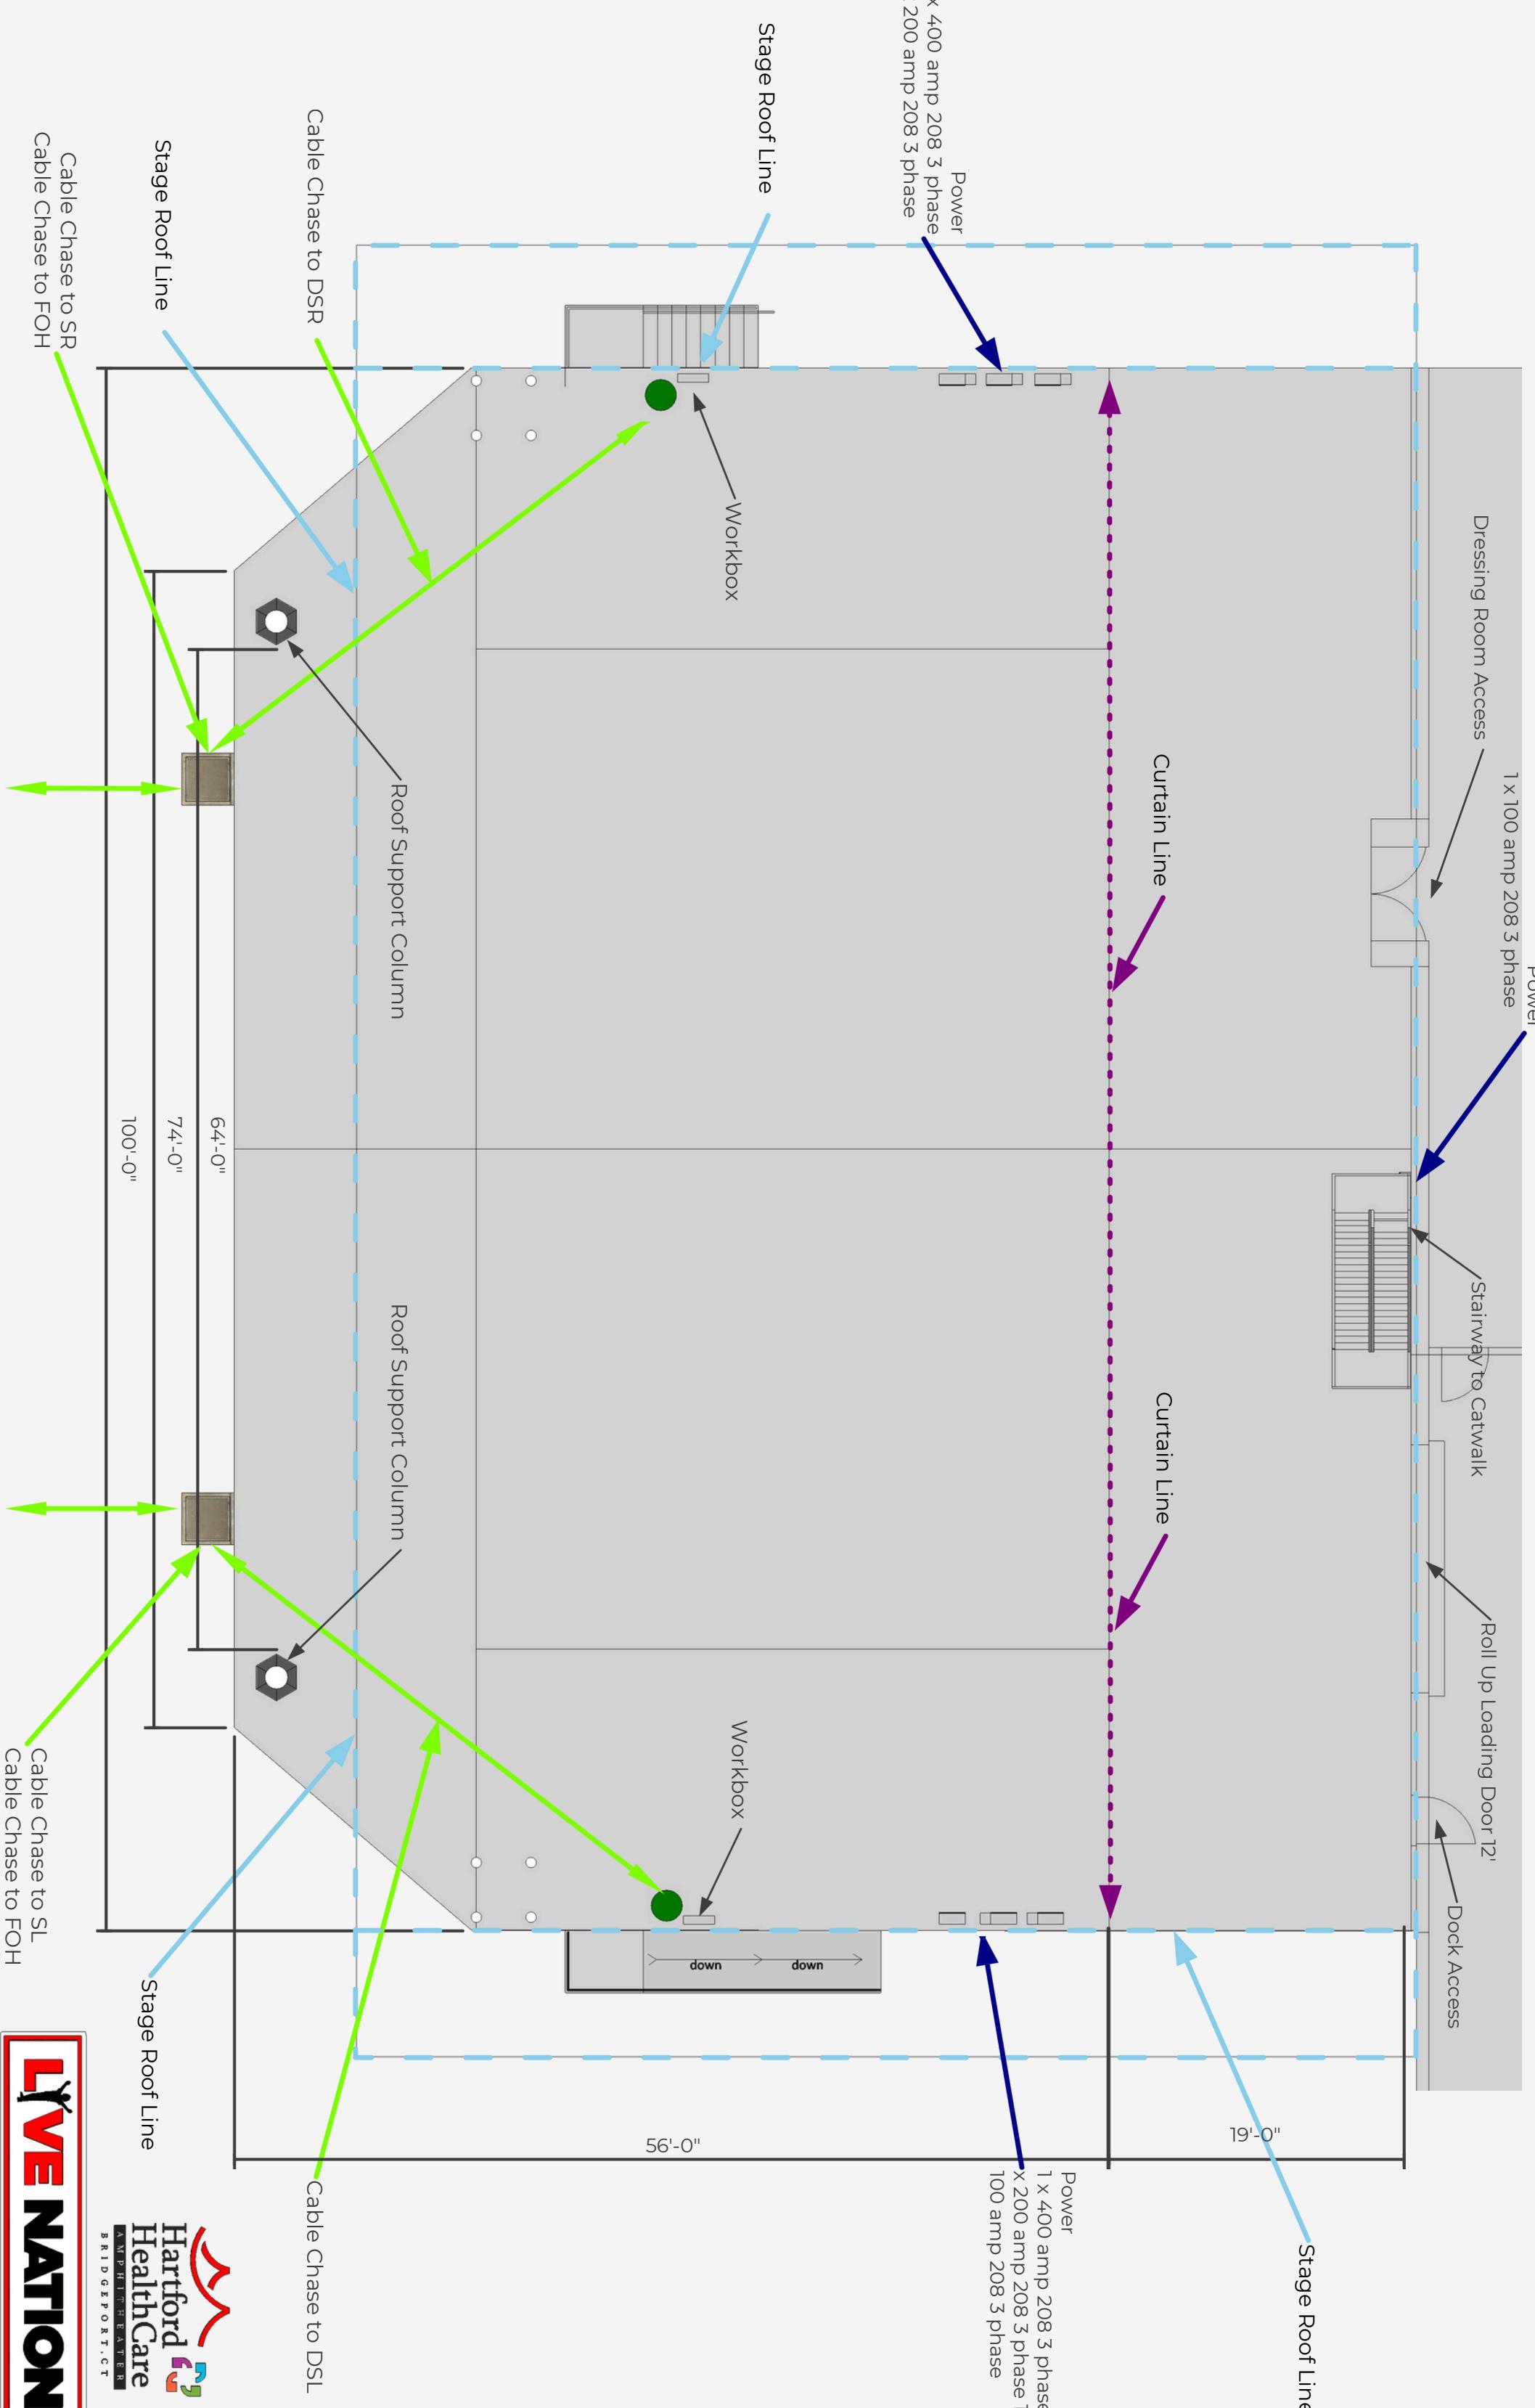

BUS PARKING / POWER

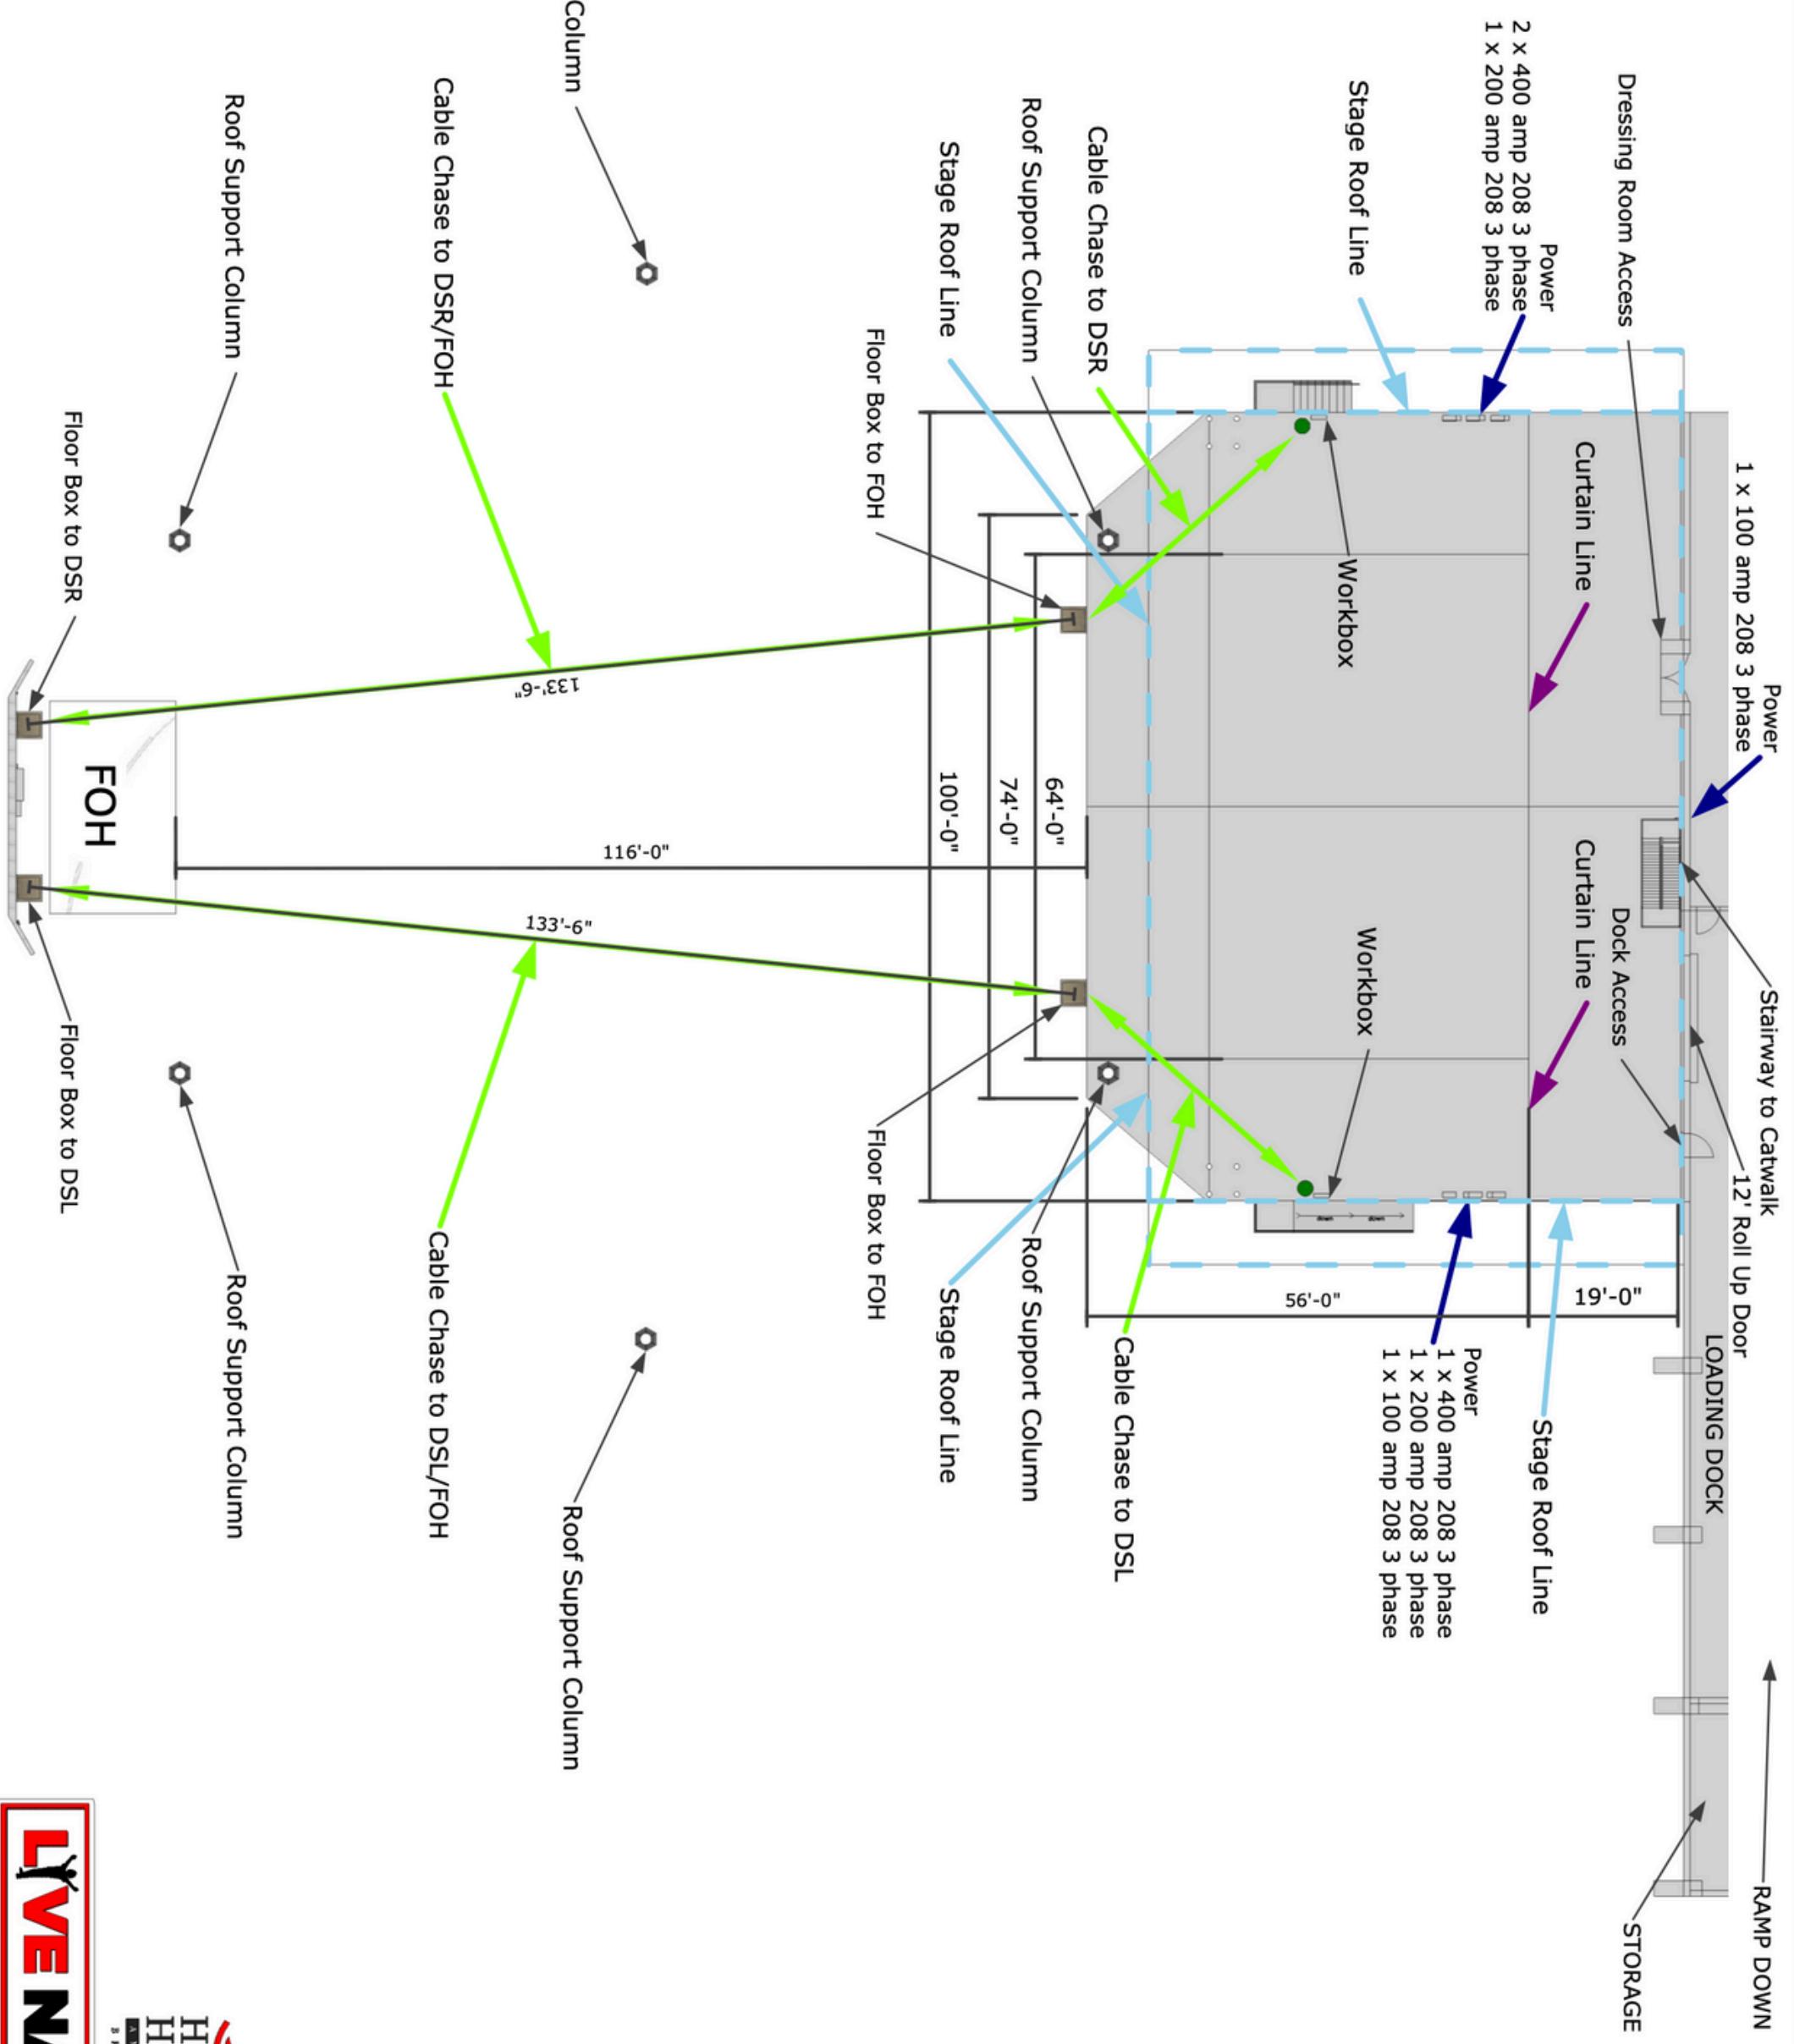

(8) Bus spaces with 50amp shore power (NEMA 14-50R), 20 amp courtesy plugs, water spickets, and IT connections.

LOADING DOCK (covered)

USL – 75'w (6 trucks, 1- ramp, 1 – fork bay) X 14'd truck height

Stage access - USL roll up door 16'w X 10'h

RIGGING

GRID HEIGHT

51' from stage surface to bottom of steel.

GRID SPACING

8' x 8' bays

GRID SIZE:

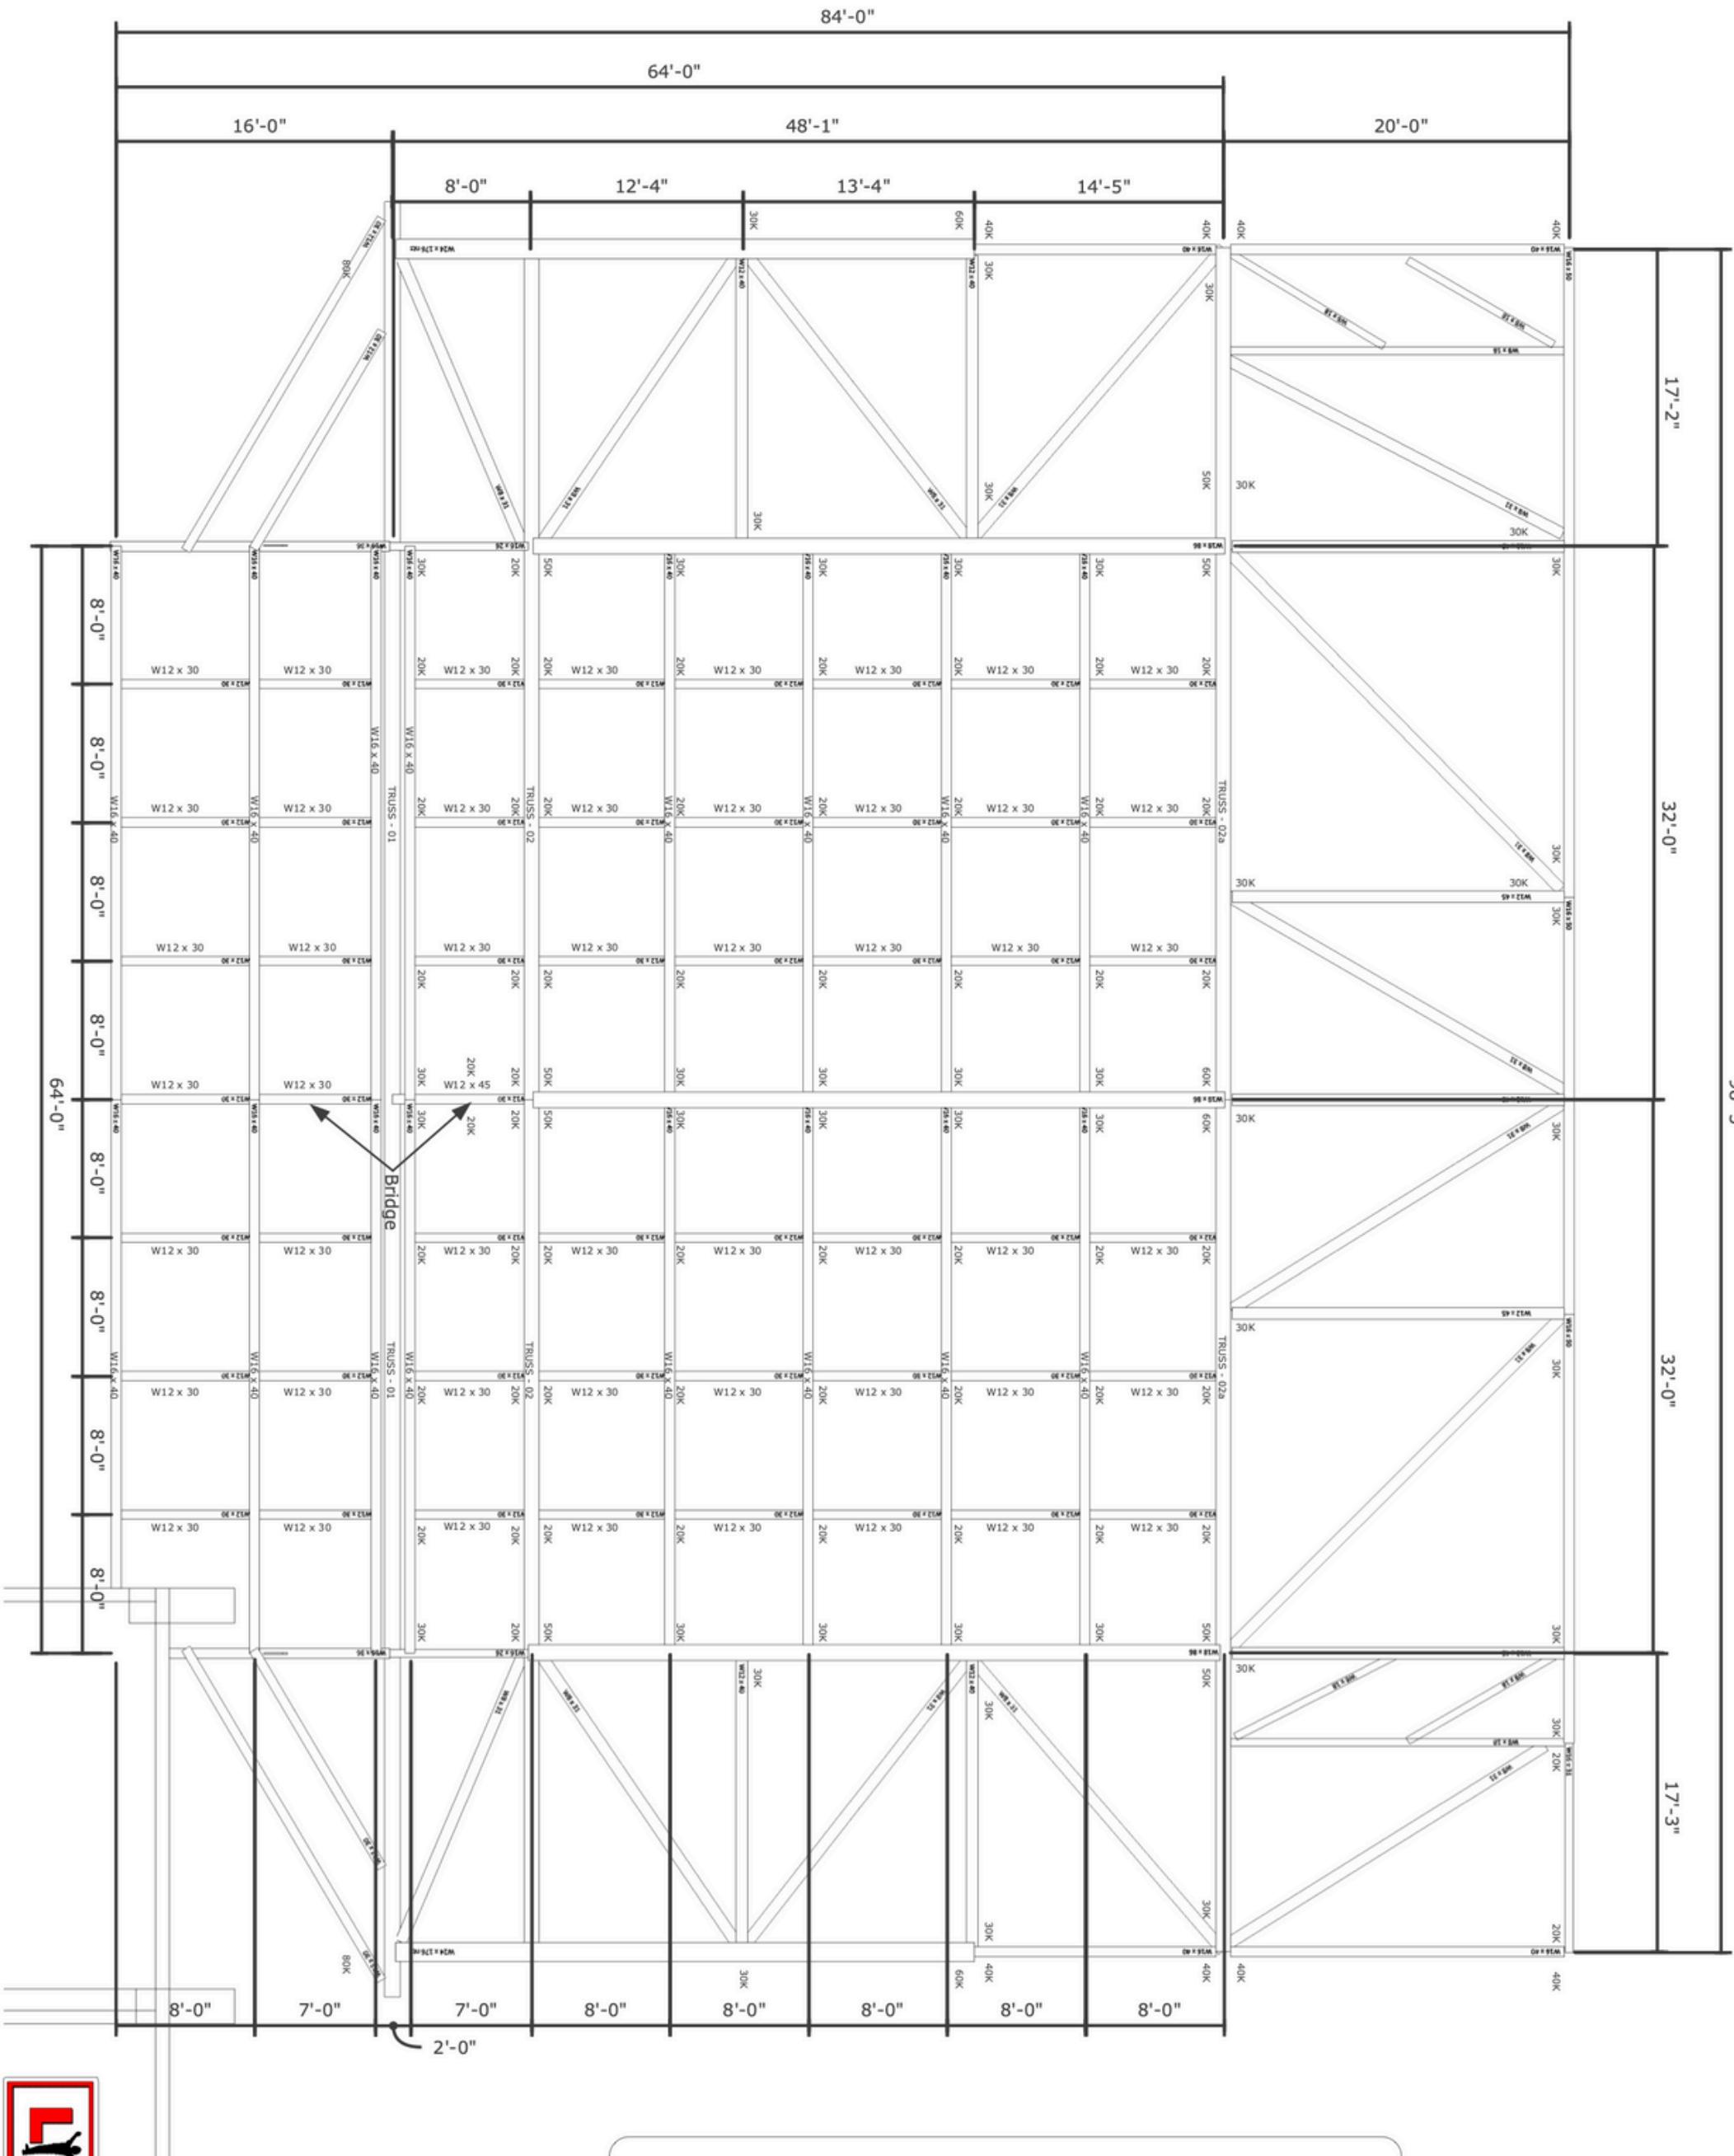

64' x 64' – with approx. 8' overhanging the DSE

The Grid was designed with 81 load points (the corners of each bay) each with the capacity to hold 2,500 pounds. simultaneously. For a total uniform load of 202,500 pounds. Concentrated loads of up to a 5,000 pounds per point, in any individual bay, may be accommodated, provided adjacent or nearby bays remain unloaded.

Baskets and Bridling may be attached anywhere along a grid beam. Bridles may run cross-stage or up and downstage, as per the preference of the tour.

Pre-Approval from the engineer has been given to accommodate an 8000 pounds concentrated loading in the downstage left and right bays, to facilitate the hanging of the Main PA. These bays being right at the front edge of the stage to allow for stage level hanging of the PA, leaving a row of bays downstage of that, as well as the bays in between the PA, to accommodate a downstage lighting truss with a total weight of 5000 pounds or less. The combined weight of PA and Lighting in the downstage two rows of grid (the “Cantilever”) should not exceed 21,000 pounds in this scenario.

Production rigging can ONLY be hung from the rigging grid itself, building trusses adjacent to, as well as diagonal bracing of the grid and building, can NOT be used to support production rigging.
